Vinayak Ichake

vinyl5200 | vinayak-ichake | vinyl5200@gmail.com | +91-8452988956

Education

•Indian Institute of Technology Guwahati *2023-2025*
M.Tech, Computer Science & Engineering CGPA: 8.71

•Government College of Engineering and Research Awasari Khurd, Pune *2018-2022*
Bachelor of Engineering, Computer Science(AI and ML) CGPA: 8.34

Work Experience

•Computer Age Management Services (CAMS)
July 2025 - Present Software Development Engineer

- Built and scaled **high-throughput microservices** using **REST, GraphQL, and gRPC**, optimizing latency and improving overall system performance under real-world traffic.
- Created a **production-grade API compatibility framework** (traffic replay + side-by-side validation) to detect breaking changes early, reducing regressions by **∼70%**.
- Developed features for a **POS-based investment platform** for Tier-2/Tier-3 regions, enhancing transaction accessibility and increasing investor onboarding by **20–25%**.
- Architected a **secure API gateway on GCP Apigee** with **OAuth2, encryption, rate limiting, and spike arrest**, maintaining **∼99.9% uptime** at scale.
- Built an **enterprise-grade MCP server** with **security guardrails, centralized logging, and extensible architecture**, ensuring high availability and production readiness.
- Designed **LLM-powered automation systems** using **RAG and n8n**, enabling intelligent workflows, data extraction, and summarization while improving developer productivity.

•Axtria Ingenious Insights
May 2024 – July 2024 Analyst Intern

- Performed **SQL-driven data validation and MDM/ETL workflow support**, working with **Snowflake, Jira, and Axtria platforms** to ensure data integrity and streamline analytics pipelines.

•HCL Technologies Ltd.
Sept 2022 – July 2023 Graduate Engineer Trainee

- Developed **Java/Spring Boot backend services** and **ReactJS frontend components** in an agile environment, contributing to performance improvements and production bug fixes.

Projects

•Scalable IBS-based Blockchain Framework for IoT Transaction Management
M.Tech. Thesis

- Pioneered a **scalable Identity-Based Signature (IBS) blockchain framework** for IoT transaction management using the **BLMQ scheme**, achieving low latency of up to **52 ms**.
- Engineered a **decentralized region-based architecture** to enhance scalability and throughput, reducing memory consumption by **80%+** compared to traditional setups.
- Tools & Technologies: Hyperledger Fabric, Blockchain, BLMQ Algorithm, IPFS, ERC-721

•Detection of Dyslexia Using Handwriting Images

- Designed an **automated dyslexia detection system** by analyzing handwriting patterns and extracting discriminative visual and textual features using multiple classifiers (**ANN, SVC, Decision Tree**)
- Demonstrating improved performance using image-derived features over text-based approaches.
- Tools & Technologies: OpenCV, Tesseract OCR, TensorFlow, Machine Learning

Technical Skills and Interests

Languages: C, C++, Python, Java
Backend: Spring Boot, Microservices
API & Protocols: REST, GraphQL, gRPC, OAuth2, API Gateway, Rate Limiting
Cloud & Databases: Google Cloud Platform, Apigee, MySQL, PostgreSQL, MongoDB
AI/ML: LLMs, RAG (Retrieval-Augmented Generation), n8n
Developer Tools: IntelliJ IDEA, VS Code, Git, Postman, Swagger, Jupyter Notebook, Eclipse
Core Concepts: Data Structures & Algorithms, System Design, Distributed Systems, Observability
Areas of Interest: Backend Systems, Scalable Systems, Cloud Computing, Applied AI

Achievements

•Competitive Coding Solved 1000+ problems across LeetCode, Coding Ninjas, and GeeksforGeeks. *2025**

•Best Employee Award Received **Quarterly Best Performer Award** at **CAMS** for outstanding contributions. *2025*

•GATE 2023 Qualified with **98.70** percentile and All India Rank **983**. *2023*
